Use of Data Science in Osteonathic Medicine hy	/ Michael Present:	ation will focus on the	introduction of data	a science and the emerging fields by

healthcare decisions.

being able to analyze large amounts of data in real time can have effect on patients and providers. Continuous longitudinal real time data is much more valuable than data that is episodic. Will do hands-on demonstration of OMT with several devices and demonstrate how dashboards of health can provide insights to empower patients to make better

Student Lectures and Breakout Sessions

March 7				
SAAO Board of Governors Day 2 \$30 Thursday lunch voucher (do not select if y	ou are attending the SAAO Board of Governors meeting Day 2)			
Thursday Workshops, 6:00–7:15pm Introduction to Cranial by Osteopathic Cranial Association Rain Association	ank workshops from 1 (most desirable) to 2			
Shockwave Trauma in Running Athletes by Jonathan W Torres, DO, MPA, FACOFP, FAAO	The body responds to forceful trauma by dispersing the shockwave of force throughout the body consistent with a tensegrity model. Unfortunately, if disruptions occur to that kinetic chain, it will compromise the body's intrinsic capacity to manage trauma, leading to progressive somatic dysfunction, frequent complaints of pain, and limited athletic performance. We will discuss methods for diagnosing and treating the consequences of repetitive shock through the body with a focus on impact via the feet. Treatment will focus on shockwave patterns commonly experienced by running athletes.			
Select one: 8:30pm-10pm Mentorship F	Program Evening with the Stars & Stripes (students allowed)			
March 8				
\$30 Friday lunch voucher ONMM Residency Information & Job Fair (4-7	pm)			
What Program Pathway are you interested in? (Select all that app	oly)			
☐ ONMM1 (36 mo.) ☐ Part-time ONMM3 ☐ ONMM2 (24 mo.) ☐ Fellowship: ☐ ONMM3 (12 mo.) ☐ Other:				
What program year are you hoping to start? What geographical region(s) are you looking for? Northeast South West Do you have any particular programs in mind?	☐ Midwest			
Friday Workshops, 2–3:30pm and 4-5:30pm Ra	ank workshops from 1 (most desirable) to 2			
Caring for Children with Disabilities by Jorge Aranda-Beltran The Lazy Sacrum by Paula Archer, DO and Charles A. Beck, DO, FAAO	The workshop aims to provide insights, knowledge, and practical skills to effectively care for children with disabilities. By incorporating osteopathic manipulative techniques based on the polyvagal theory, global visceral abdominal manipulation, and general osteopathic treatment optimizing spinal mechanics, attendees will gain a comprehensive understanding of how to optimize vagal nerve function and promote the overall health and well-being of children with disabilities. The sacrum is an integral part of patient care. By utilizing Mitchel's Sacral axis, the 10 sacral diagnoses can be broken into 3 categories. Come learn how to easily treat these dysfunctions.			
Friday Workshops, 8:30–10pm (no repeat)	ank workshops from 1 (most desirable) to 2			
Osteopathy in the United Kingdom: first contact healthcare professionals by Glynis Fox	Osteopaths and Osteopathic Physicians are two sides of a global force in healthcare, but understanding how each half of the profession goes about providing the highest standards of healthcare is perhaps not as mutually clear as it should be. The objective of this session, by Glynis Fox, the President of the UK Institute of Osteopathy – the country where osteopathy first attained statutory regulation in Europe – is to explain how an osteopath works, the training and clinical experience base we have, the approach to diagnosis and treatment, the types of patients we support, and our relationship with GPs and the National Health Service. But as importantly, to explore with you how this differs from or is congruent with DO training and practice – in order to build the common understanding that will allow osteopaths and osteopathic physicians to work together better in the future.			
Pediatric Sports Medicine by Cathleen McGonigle	Description pending

March 8 FAAO and NUFA only: Magoun Memorial For	rum (8-9:30am)		
	Rank workshops from 1 (most desirable) to 2		
Sympathetic Overdrive: OMT for stress management and self-regulation by Amber Gruber	It's a pretty common practice to sacrifice your 20s to become a physician. Unfortunately, in the process of doing so, you may also sacrifice a bit of yourself in the process. In this workshop, you will have space to review how you respond to environmental stressors and what effects it may be having on your own body. We will review the delicate balance of the autonomic nervous system and how this can be accessed via OMT. We will learn to identify when a patient may be experiencing "sympathetic overdrive" and how to approach the condition in conversation and treatment. Treatment techniques will focus on diaphragm, linea alba, lower ribs as access points to the sympathetic chain ganglia. We will also review different breathing and mindful meditation techniques which can self serve, as well as be a valuable resource for your patients.		
Optimization in the Military by Jennifer I. Leggoe, DC	Discussion and review of various Osteopathic-minded approaches to medicine in the military.
